Blogs

Edition of the Cyber Brief offers some critical insights, videos, and infographics for combating cyber threats. We hope you find these resources valuable, informative, and thought-provoking.

Ensuring safe cyber practices is no longer just under the purview of IT personnel. A substantial number of cyber incidents can stem from the simple act of clicking a link, whether it is in an email or text message, or on a webpage. Training employees in cybersecurity and keeping them updated with the latest developments is crucial.

Cybersecurity awareness and training is necessary to raise our cyber awareness? The lack of robust pre-emptive defenses could cost millions. All businesses, large and small, must evaluate their security strategies and strengthen their defenses against cyberattacks. Cybersecurity awareness and training are critical for protecting sensitive data. In 2021, we have witnessed a series of high-profile cyber incidents making headlines. As firms adapt to the new realities of remote work and access and share more online resources and businesses continue to store an increasing volume of sensitive data, the risk of network security attacks is much bigger issue today.

As the pandemic ushered in by the COVID-19 pandemic, threats have grown in scope, allowing sophisticated exploits and new vulnerabilities to slip in. Consequently, anti-forensics techniques are designed to frustrate digital forensics investigators...

Every Digital Forensic Investigator should be aware of the threat landscape and to safeguard our sensitive data and business assets. This raises an important question: How long can we afford to ignore the need to raise our cyber awareness?
